Overview

The **Overview** section addresses concepts applicable to the entire product.

The topmost navigation options should be ones that will appear in most/all products:

- (1) guides that introduce basic concepts and general workflows of the whole product (i.e., "Quickstart Guide")
- (2) explanations of any major new changes/features that have rolled out (i.e., "What's New")

Underneath, other navigation options specific to the product should appear (i.e., "Basic vs. Pro" is important general-level information applicable only to the Climate grower apps product).

Features

The **Features** section addresses specific pages/features of the product.

The navigation options should *mirror the navigation and structure of the actual product as much as possible*. In-context help functionality, when built, will draw from content in this section.

Thus, all of these type of questions for features will be in this section:

- "What is/are..."
- "How do I..."
- "How does Climate..."

Information

The **Information** section addresses data that Climate Corporation has (e.g., data sources, research sources, etc.) and other data/information.

The content in this section should be widely linked/referred to from other help articles in other sections (e.g., a help article generally explaining the Dashboard page's data could link to multiple, detailed data source articles in this section).

Legal

The **Legal** section contains all the necessary legal stuff that we have to put onto the website.

The content in this section should be linked/referred to from other help articles, if needed.

Tier 2 Navigation

There may be a time at some point, where If a topic encompasses enough questions, it should be expanded into a second tier of navigation (see next page).

Weather Data

Precipitation: Historical

Precipitation: Forecast

Weather Conditions

Wind Speed

Hail

Agromony Data

Soil Moisture

Growth Stage: Corn

Growth Stage: Soybeans

Growth Stage: Winter Wheat

Other Data

Workability

Yield Impact

Breadcrumb

For a second tier of navigation, the breadcrumb updates to reflect the new tier of navigation. The previous tiers of navigation are links to return back those respective tiers.

Back to Previous Tier

Within a deeper tier of navigation, the topmost option will *a/ways* be a back button to return to the previous tier of navigation.

2nd Tier Grouping of Navigation

The grouping of questions and topics will depend on the actual content. If in doubt on a good way to do this, consult with the design team and/or someone with information architecture or content strategy expertise.
